relations, especially among the coastal Koryaks. Thus, related families of Alyutortsy combined in summertime for common fishing. The catch was divided equally among them. Their sea hunting was also collective. From seven to eight persons went out to hunt together. On returning to the village, they divided the meat and fat of the seals killed during the hunt in equal shares among all the residents of the village; only the skin of the bearded or common seal went to the man who killed it. Kamentsy also shared equally the meat and fat of the seal they hunted in common, but sometimes the owner of the boat took a larger share.

The reindeer-breeding Alyutortsy also combined into 4-6 kindred families, which nomadized and herded their deer in common. These were productive associations of a temporary nature, similar to the temporary associations of fishermen and sea hunters.

According to 18th-19th-century data, the coastal Koryak family was already economically self-sufficient at that time. Individual families owned boats, nets, and traps, which they were free to use at their own discretion, down to selling them to other families. But there were also cases where nets belonged collectively to related families.

Even by the time of the Revolution, social inequality was not sharply expressed among the coastal Koryaks. They lived predominantly in a subsistence, consumption economy, with fur as the only commodity for sale.

The situation among the Chavchuvens was quite different. Even in the early part of the 18th century, Krasheninnikov wrote about the wealth of individual reindeer-breeders. Thus, already there was sharp property differentiation among the reindeer-breeders at that time. The process of stratification became still more intensified in the 19th century in connection with the development of trade.

At the time of the Revolution, there were among the reindeer-breeders men of great wealth, who owned herds of thousands of reindeer. On the other hand, there were householders owning only 10-15 reindeer and therefore compelled to work for the rich as herdsmen. Very often, distant relatives of the owners also became herdsmen; in such cases, family relations served as a cover for the usual exploitation.

In exchange for his hard labor in tending the reindeer, the herdsman received from his master only meat for his food and skins for his clothing, with the quantity of the compensation dependent entirely on the will of the master. The encampment of the rich Koryak usually included several families of herdsmen entirely dependent on their master economically and subject to his will in everything. The herdsmen could not kill a reindeer for food without the master's permission, and therefore often went hungry. In addition to tending reindeer, they performed a variety of other tasks: prepared firewood, brought water, hunted fur animals. The rich reindeer-breeder disposed of the labor of the herdsman's family as well. The herdsman's wife and daughters processed the reindeer skins for the master, made thread of reindeer sinew, sewed clothing and boots of reindeer-skins, etc. It was difficult for a herdsman to leave his master. Although custom permitted the changing of masters (in the fall, when the season began), in reality this was difficult to accomplish. The chief obstacle was the "debts" which the herdsman had managed to incur with his master: during the year he obtained from the latter small quantities of tea, sugar, flour, cartridges, etc. The master was not bound to provide imported goods; he merely had to "feed" his herdsmen. For a year's work, the herdsman received a female reindeer. As a rule, each herdsman owned 5-6, and only occasionally 10 or more, reindeer, earned by several years of hard labor. Naturally, with such a small number of reindeer it was impossible to live independently.
